

225080370 Kondjashili Shatimwene individual contribution report

Testing, images are below there

I put in abc it says invalid, I put in number 9 since it asked for a valid whole number I said it has to be between 1 and 6 I put in -1 it said the same thing I present enter without any input it said please and it didn't crash so that's not so bad. I later went on I opted to add an employee I put in a random employee ID then I later put in one with a negative salary. I tried to put one with ID it rejected. When I put in let's say for instance 20 000 it rejects spaces. After that it successfully added alex spiro his an attorney by the way. I later went to the Budget management added departments and their budget and that worked well. I later went assets I added assets such as mac studios in the IT department with the actual prices you would get them in I store. I later validated all the reports. They displayed all the reports with no errors.
